PROFESSIONAL (or PROGRAM) ELECTIVE (PE) COURSES
[CIVIL ENGINEERING]

The Professional Electives are categorized into six different tracks viz. : Geotechnical engineering (PE1), Structural Engineering (PE2) and construction Engg and Management (PE3) to offer in 6th semester and the remaining three tracks i.e Transportation Engineering (PE4), Environmental Engg (PE5) & water Resources (PE6) to offer in 7th semester

The Program Elective Groups/courses have been categorized/developed keeping in mind the employment prospects of the students. The Program design in B.Tech. CE aims at providing domain specific knowledge to a student at UG level in progression. The Program/course design has been carried out jointly by the Academia in close coordination with Industry to provide a leading edge to the students and to prepare them as per the Industry needs

Professional Elective Course Tracks –Civil Engineering [PEC-CE]

Track	Code Number	Professional Core Course	Semester	Credits
Track-I	PECE-602X-18	Geotechnical engineering	6	4
Track-II	PECE-603Y-18	Structural Engineering	6	4
Track-III	PECE-604Z-18	Construction Engg and Management	6	4
Track-IV	PECE-701X-18	Transportation Engineering	7	4
Track-V	PECE-702Y-18	Environmental Engg	7	4
Track-VI	PECE-703Z-18	Water Resources	7	4
Total Credits				24

Basket of Professional Elective for different Tracks

2	Traffic Management	OECE- 702-18	ODD	3	0	0	3
3	Road Safety	OECE-703-18	ODD	3	0	0	3
4	Environmental Impact Assessment	OECE-704-18	ODD	3	0	0	3
5	Construction Materials	OECE-705-18	ODD	3	0	0	3

3rd Semester Syllabus

B. Tech Civil Engineering

Third Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses	BTCE-301-18	Surveying & Geomatics	3	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Course Outcome
The course will enable the students to:

1. Understand the concept, various methods and techniques of surveying
2. Compute angles, distances and levels for given area
3. Apply the concept of tachometry survey in difficult and hilly terrain.
4. Select appropriate instruments for data collection and survey purpose
5. Analyze and retrieve the information from remotely sensed data and interpret the data for survey.
6. Understand the concepts related to GIS and GPS and analyze the geographical data.

Content

Unit-I: Introduction to Surveying: Principles, Survey stations, Survey lines- ranging, direct & indirect ranging, Bearing and its measurement with prismatic compass, calculation of angles from bearings, Local Attraction Levelling, Principles of levelling- booking and reducing levels; differential, reciprocal leveling, profile levelling and cross sectioning. Digital and Auto Level, Errors in levelling; contouring: Characteristics, methods, uses; areas and volumes. Setting up the plane table and methods of plane tabling (Radiation and three point problem only).

Unit-II: Triangulation and Trilateration: Theodolite survey: Instruments, Measurement of horizontal and vertical angle; Balancing of Traverse, Omitted Measurements, Tachometry: Definition, determination of tachometer constants and reduced level from tachometric observations. Triangulation - network- Signals. Baseline - choices - extension of base lines - corrections - Trigonometric leveling .

Unit-III: Curves: Elements of simple and compound curves – Method of setting out Transition curve – length of curve – Elements of transition curve.

Photogrammetry Surveying: Introduction, Basic concepts, flight planning; Stereoscopy, photographic mapping- mapping using paper prints, mapping using stereoplotting instruments, mosaics, map substitutes.

Unit-IV: Modern Field Survey Systems: Principle of Electronic Distance Measurement, Modulation, Types of EDM instruments, Distomat, Total Station – Parts of a Total Station – Accessories – Advantages and Applications, Field Procedure for total station survey, Errors in Total Station Survey; Global Positioning Systems- Segments, GPS measurements, errors and biases, Surveying with GPS, LADAR (drone and vehicle based)

Remote Sensing: Introduction – Electromagnetic Spectrum, interaction of electromagnetic radiation with the atmosphere and earth surface, remote sensing data acquisition: platforms and sensors.

Third Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
3	Professional Core courses #	BTCE-303-18	Fluid Mechanics	3	0	0	3
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Course Outcomes After completion of the course, student is able to <ol style="list-style-type: none"> 1. Understand the basic terms used in fluid mechanics and its broad principles 2. Estimate the forces induced on a plane/ submerged bodies 3. Formulate expressions using dimensionless approach and able to determine design parameters by creating replica of prototype at appropriate scale. 4. Apply the continuity, momentum and energy principles and design the pipelines used for water supply or sewage under different situation. 5. Calculate drag force exerted by fluid on the body of varying shapes and able to minimize them. 6. Design and addressing problems in open channel (lined/ unlined) of different shapes and size optimally as per site condition. 							
Content Unit-I: Basic Concepts and Definitions – Distinction between a fluid and a solid; Density, Specific weight, Specific gravity, Kinematic and dynamic viscosity; variation of viscosity with temperature, Newton law of viscosity; surface tension, capillarity, Bulk modulus of elasticity, compressibility. Fluid Statics - Fluid Pressure: Pressure at a point, Pascals law, Piezometer, U-Tube Manometer, U-Tube Differential Manometer, Micromanometers, pressure gauges, Hydrostatic pressure and force: horizontal, vertical and inclined surfaces. Buoyancy and stability of floating bodies. Unit-II: Fluid Kinematics - Classification of fluid flow : steady and unsteady flow; uniform and non-uniform flow; laminar and turbulent flow; rotational and irrotational flow; compressible and incompressible flow; ideal and real fluid flow; one, two and three dimensional flows; Stream line, path line, streak line and stream tube; stream function, velocity potential function. One-, two- and three -dimensional continuity equations in Cartesian coordinates Fluid Dynamics - Surface and body forces; Equations of motion - Euler's equation; Bernoulli's equation – derivation; Energy Principle; Practical applications of Bernoulli's equation : venturimeter, orifice meter and pitot tube; Momentum principle; Forces exerted by fluid flow on pipe bend; Dimensional Analysis and Dynamic Similitude - Definitions of Reynolds Number, Froude Number, Mach Number, Weber Number and Euler Number; Buckingham's π -Theorem. Unit-III: Laminar Flow & Turbulent Flow - Laminar flow through: circular pipes, parallel plates. Stoke's law, Reynolds experiment, Transition from laminar to turbulent flow. Prandtl's mixing length theory, universal velocity distribution equation. Resistance to flow of fluid in smooth and rough pipes, Moody's diagram. Flow through Pipes: Loss of head through pipes, Darcy-Wiesbach equation, minor losses, total energy equation, hydraulic gradient line, Pipes in series, equivalent pipes, pipes in parallel Boundary Layer Analysis - Assumption and concept of boundary layer theory. Boundary-layer thickness, displacement, momentum & energy thickness, laminar and Turbulent boundary layers on a flat plate; Laminar sub-layer, smooth and rough boundaries. Local and average friction coefficients. Separation and Control. Unit-IV: Open Channel Flow - Introduction, Comparison between open channel flow and pipe flow, geometrical parameters of a channel, Uniform Characteristics of uniform flow, Chezy's formula, Manning's formula. Most economical section of channel. Specific energy, Specific energy curve, critical flow, discharge curve Specific force Specific depth, and Critical depth. Channel Transitions. Theory of hydraulic jump, Elements and characteristics of hydraulic jump in a rectangular Channel, length and height of jump, location of jump, Types, applications and location of hydraulic jump. Energy dissipation and other uses. References: <ol style="list-style-type: none"> 1. Fluid Mechanics & Hydraulic Machines : Dr. R.K. Bansal 2. Hydraulic and Fluid Mechanic by P.N. Modi & S.M. Seth 3. Third Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
4	Basic Science Course	BTAM-301-18	Mathematics-III (Transform & Discrete Mathematics)	4	0	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Course Outcomes:

1. Understand the basic results on vector function, their properties and fields so as to apply them for solving problems of engineering.
2. Find length, area and volume using integral calculus that is an important application in engineering.
3. Solve some real problems in engineering using Gauss Divergence and Stokes' theorem
4. To formulate Laplace transform of functions and its applications to solve differential equations that form real life problems in engineering.
5. To formulate Fourier Series, its properties and its applications to solve problems in engineering.

Detailed Content

Section A

(20 lectures)

Unit I: Vector Calculus-I: Scalar and Vector point function, Gradient, Directional derivatives, Divergence, Curl and their identities, line, surface, volume integrals and their applications, Solenoidal and Irrotational fields.

Unit II: Vector Calculus-II: Applications of Green, Gauss and Stokes Theorems, orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds.

Section B

(20 lectures)

Unit III: Transforms Calculus-I: Laplace Transform, Properties of Laplace Transform, Laplace Transform of Unit step function, Impulse function, Dirac-delta function, Periodic functions. Inverse Laplace Transform, convolution theorem, Evaluation of integrals by Laplace Transform, Applications to ODEs and PDEs.

Unit IV :Transforms Calculus-II: Fourier Series, half range Fourier Sine and Cosine series, Fourier integrals, Gibbs Phenomenon, Fourier transforms, Relation between Laplace and Fourier transform, Properties of Fourier Transforms, Convolution Theorem and applications

				L	T	P	
6	Humanities and Social Sciences including Management	HSMC-132-18	Civil Engineering- Introduction, Societal & Global Impact	3	0	0	3
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Course Outcomes <ol style="list-style-type: none"> 1. Introduction to what constitutes Civil Engineering 2. Understanding the vast interfaces this field has with the society at large 3. Providing inspiration for doing creative and innovative work for the benefit of the society 4. Need to think innovatively to ensure Sustainability 5. Highlighting the depth of engagement possible within civil engineering and exploration of various possibilities of a career in this field 							
Content <p>Unit I: Civil Engineering and its historical developments; Understanding the importance of Civil Engineering in shaping and impacting the world; the ancient and modern Marvels and Wonders in the field of Civil Engineering; Scope of work involved in various branches of Civil Engineering and future vision; Recent Civil Engineering breakthroughs and innovations; Avenues for entrepreneurial working.</p> <p>Unit II: Understanding the past to look into the future; Pre-industrial revolution days, Agricultural revolution, first and second industrial revolutions, IT revolution and how these eras helped the civil engineering to grow; Concept of sustainability and the steady erosion of the environment due to haphazard developments; Global warming, its impact and possible causes; Atmospheric pollution; Pollution Mitigation measures; Health & Safety aspects for stakeholders; Environmental Impact Analysis: Concept and procedures; Innovations and methodologies for ensuring Sustainability.</p> <p>Unit III: Infrastructure development and growth of the Nation; its effects on the GDP, employment, living standards of the people, etc.; Introduction and overview to Futuristic systems: Megacities, Smart Cities, Stadia; Roads, Railways, Metros, Hyper Loop, Airports, Seaports, River ways, Sea canals, Tunnels, bridges.</p> <p>Unit IV: Energy Generation: Hydro, Solar, Wind, Wave, Tidal, Geothermal, Thermal energy; Telecommunication needs: towers, above-ground and underground cabling; Flood control: Dams, Canals, River interlinking; Energy efficient built-environments and LEED ratings; Awareness of various Codes & Standards governing Infrastructure development.</p> <p>Suggested Readings</p> <ol style="list-style-type: none"> 1. Salvadori, M and Heller, M, Structures in Architectures, PHI. 2. Fintel, C, Handbook of Civil Engineering, CBS Publications. 3. Žiga Turk (2014), Global Challenges and the Role of Civil Engineering, Chapter 3 in: Fischinger M. (eds) Performance-Based Seismic Engineering: Vision for an Earthquake Resilient Society. 7	Professional Core courses	BTCE-306-18	Surveying & Geomatics Lab	0	0	2	1
External Marks: 20, Internal Marks: 30, Total Marks: 50							
<p>Course Outcomes After completing the course the students must demonstrate the knowledge and ability to:</p> <ol style="list-style-type: none"> 1. Assess horizontal & vertical angles by Theodolite. 2. Survey the area using different methods of plane tabling and compass survey and to adjust the compass traverse graphically. 3. Compute the reduce levels using various methods of leveling. 4. Predict the location of any point horizontally and vertically using Tachometry. 5. Setting out curves in the field. 6. Use electronic survey instruments. <p>Course Content</p> <ol style="list-style-type: none"> 1. Measurement of bearing and angles with compass, adjustment of traverse by graphical method. 2. Different methods of leveling, height of instrument, rise & fall methods. 3. Measurement of horizontal and vertical angle by theodolite. 4. Determination of tachometric constants and determination of reduced levels by tachometric observations. 5. Plane table survey, different methods of plotting, three point problem. 6. Determination of height of an inaccessible object. 7. Setting out of circular curves in the field using different methods. 8. Plotting of traverse using the Total Station and GPS. 							

Study Scheme and Syllabus of B. Tech Civil Engineering, Batch 2018 onwards
Board of Studies – Civil and Environmental Science, Affiliated Colleges, IKGPTU Kapurthala

Third Semester							
S. No.	Category	Code	Course Title	Hours per			Credits
				L	T	P	
8	Professional Core courses	BTCE-307-18	Fluid MechanicsLab	0	0	2	1
External Marks: 20, Internal Marks: 30, Total Marks: 50							
Course Outcome 1 Select appropriate pressure measuring device under different condition of flow. 2 Determine the stability of a floating body. 3 Understand and apply Bernoulli's theorem practically. 4 Find discharge of fluid through pipe, orifices and in open channel. 5 Estimate the major and minor losses in pipe. 6 Estimate the various elements and energy losses in hydraulic jump.							
Lab Experiments 1. To study of pressure measuring devices as peizometer, U-tube manometer, and pressure gauges. 2. To verify Bernoulli's Theorem 3. To determine the Meta centric height of a Floating Body under different condition. 4. To determine the coefficient of discharge of a Venturimeter. 5. To determine the coefficient of discharge of a Orifice Meter 6. To determine the coefficient of friction of different diameter pipes. 7. To estimate the minor losses as energy loss in pipe bend, sudden contraction or enlargement in pipe. 8. To determine the coefficient of discharge on rectangular and V-notches. 9. To determine the various element of a hydraulic jump.

Fourth semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
4	Professional Core courses	BTCE-404-18	Transportation Engineering	3	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Course Outcomes

After completing this course the student must demonstrate the knowledge and ability to:

1. Appreciate the importance of different modes of transportation and characterize the road transportation.
2. Alignment and geometry of pavement as per Indian Standards according to topography.
3. Assess the properties of highway materials in laboratory
4. Understand the importance of railway infrastructure planning and design.
5. Identify the functions of different component of railway track.
6. Outline the importance of Airport Infrastructure

Course Content

Unit I: Introduction: Importance of Transportation, Different Modes of Transportation, Characteristics of Road Transport.

Transportation Systems: Multi modal transportation system, Characteristics of Mass Transit systems including technical, demand operational and economic problems, fixed Track Facility, Mass Rapid Transit System-Elevated, Surface and Underground construction, Express Bus System, integrated Operating Characteristics of Terminal and Transfer facilities.

Unit II: Highway Development & Planning: Principles of Highway Planning, Road Development in India, Classification of Roads, Road Patterns, Planning Surveys; Highway Construction: Right of way; Earthen/Gravel Road, Water Bound Macadam, Wet Mix Macadam, Bituminous Pavements, Cement Concrete Pavements

Unit III: Railway Engineering: History of Railways, Development of Indian Railway, Organisation of Indian Railway, Important Statistics of Indian Railways. Railway Gauges: Definition, Gauges on World Railways, Choice of Gauge, Uniformity of Gauge, Loading Gauge, Construction Gauge.

Railway Track: Requirements of a Good Track, Track Specifications, Detailed Cross-Section of Single/Double Track used in Indian Railways. Components of permanent way - Rails, Sleepers, Ballast, Sub-grade and Formation, Track Fixtures & Fastenings, Coning of Wheels, Tilting of Rails, Adzing of Sleepers, Rail Joints, Creep of Rails.

Unit IV: Airport Engineering: Introduction, Air Transport Scenario in India and Stages of Development, National and International Organizations; Airport planning - Site selection, runway orientation, etc. Concept of Head Wind, Cross Wind, Wind Rose Diagram, Runway Configuration.

Aircraft Parking System & Visual Aids: Main Taxiway, Exit Taxiway, Separation Clearance, Holding Aprons.: Marking and Lighting of Runway and Taxiway, Landing Direction Indicator, and Wind Direction Indicator, IFR/VFR.

Fourth semester							
S. No.	Category	Code	Course Title	Hours per			Credits
				L	T	P	
7	Mandatory Courses (Non Credit)	EVS-101-18	Environmental Science	2	0	0	0
<p>* 40 Hours are kept for various activities under the head of activities. There will be a final theory examination for the students of 50 marks but these marks will not be added to their final result as assessment will be satisfactory or non-satisfactory</p> <p>We as human being are not an entity separate from the environment around us rather we are a constituent seamlessly integrated and co-exist with the environment around us. We are not an entity so separate from the environment that we can think of mastering and controlling it rather we must understand that each and every action of ours reflects on the environment and vice versa. Ancient wisdom drawn from Vedas about environment and its sustenance reflects this ethos. There is a direct application of this wisdom even in modern times. Idea of an activity based course on environment protection is to sensitize the students</p> <p>Course Outcomes:</p> <ol style="list-style-type: none"> 1. Students will enable to understand environmental problems at local and national level through literature and general awareness. 2. The students will gain practical knowledge by visiting wildlife areas, environmental institutes and various personalities who have done practical work on various environmental Issues. 3. The students will apply interdisciplinary approach to understand key environmental issues and critically analyze them to explore the possibilities to mitigate these problems. 4. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world. <p>Detailed Contents</p> <p>Unit- I : Natural Resources :Renewable and non-renewable resources</p> <p>Natural resources and associated problems.Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. Water resources : Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies. Land resources : Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources, Equitable use of resources for sustainable lifestyles.</p> <p>Unit-II : Ecosystems : Concept of an ecosystem, Structure and function of an ecosystem, Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of following ecosystems: a. Forest ecosystem b. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)</p> <p>Unit-III : Biodiversity and its conservation : Introduction – Definition : genetic, species and ecosystem diversity, Biodiversity at global, National and local levels, India as a mega-diversity nation, Hot-spots of biodiversity, Threats to biodiversity : habitat loss, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India</p> <p>Unit-IV : Social Issues and the Environment : From Unsustainable to Sustainable development, Resettlement and rehabilitation of people; its problems and concerns., Environmental ethics : Issues and possible solutions, Climate change, global warming, acid rain, ozone layer depletion, Nuclear accidents and holocaust, Case Studies, Public awareness.</p>							

***ACTIVITIES**

Nature club (bird watching, recognizing plants at institute/at home, recognizing local animals, appreciating biodiversity)

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place. Making high resolution big photographs of small creatures (bees, spiders, ants, mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants). Videography/ photography/ information collections on specialties/unique features of different types of common creatures. Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

1 (A) Awareness Activities:

- a) Small group meetings about water management, promotion of recycle use, generation of less waste, avoiding electricity waste
- b) Slogan making event
- c) Poster making event
- d) Cycle rally
- e) Lectures from experts
- f) Plantation
- g) Gifting a tree to see its full growth
- h) ~~h) Cleanliness drive~~
i) ~~tion of waste~~
- i) To live with some eminent environmentalist for a week or so to understand his work vi)
To work in kitchen garden for mess
- j) To know about the different varieties of plants
- k) Shutting down the fans and ACs of the campus for an hour or so
- l) Visit to a local area to document environmental assets
river/forest/grassland/hill/mountain/lake/Estuary/Wetlands
- m) Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- n) Visit to a Wildlife sanctuary, National Park or Biosphere Reserve

Fourth semester							
S. No.	Category	Code	Course Title	Hours per			Credits
				L	T	P	
6	Professional Core courses	BTCE-406-18	Concrete Testing Lab	0	0	2	1

External Marks: 40, Internal Marks: 60, Total Marks: 100

Course Outcomes

1. Evaluate properties of building materials, such as cement and aggregates.
2. Conduct experiments and check the acceptance criteria (if any).
3. Design concrete mixes as per BIS provisions.
4. Analyze the properties of concrete in fresh and hardened state.
5. Create a well organized document and present the results appropriately.
6. Understand and apply non destructive testing (NDT) for evaluating concrete quality.

Content

1. Tests on cement
 - Fineness
 - Consistency
 - Setting time
 - Soundness
 - Specific gravity
 - Strength
2. Tests on aggregates (fine and coarse)
 - Specific gravity
 - Bulk Density
 - Fineness Modulus
 - Moisture content
 - Water Absorption
 - Bulking of sand
3. Design mix of concrete as per BIS method.
4. Workability tests on concrete
 - Slump test
 - Compaction Factor test
 - Vee-Bee test
5. Strength tests on concrete
 - Compressive strength (Cube and Cylinder)
 - Split Tensile strength
 - Flexural strength
 - Abrasion resistance
6. Non-Destructive Techniques
 - Rebound hammer test
 - Ultra sonic pulse velocity test

9	Professional core	BMPD- 401-18	Mentoring and professional development	-	-	2	0

Guidelines regarding Mentoring and Professional Development

The objective of mentoring will be development of:

- Overall Personality
- Aptitude (Technical and General)
- General Awareness (Current Affairs and GK)
- Communication Skills
- Presentation Skills

The course shall be split in two sections i.e. outdoor activities and class activities. For achieving the above, suggestive list of activities to be conducted are:

Part – A (Class Activities)

1. Expert and video lectures
2. Aptitude Test
3. Group Discussion
4. Quiz (General/Technical)
5. Presentations by the students
6. Team building Exercises

Part – B (Outdoor Activities)

1. Sports/NSS/NCC
2. Society Activities of various students chapter i.e. ISTE, SCIE, SAE, CSI, Cultural Club, etc.

Evaluation shall be based on rubrics for Part – A & B.

Mentors/Faculty in charges shall maintain proper record student wise of each activity conducted and the same shall be submitted to the department.

5th Semester Syllabus

				L	T	P	
1	Professional Core courses	BTCE-501-18	Engineering Geology	3	0	0	3
<p>External Marks: 60, Internal Marks: 40, Total Marks: 100</p> <p>Course Outcome</p> <p>The course will enable the students understand:</p> <ol style="list-style-type: none"> 1. The basic concepts of geological processes and their importance in civil Engineering 2. Identification of rocks and minerals and their characteristics 3. Significance of geological structures and processes in civil engineering projects 4. Site characterization and geologic considerations in construction <p>Content</p> <p>Unit-I: General Geology: Scope of geology in Civil Engineering - the earth, its structure and environment - Standard geological time scale, unit & fossils. physiographic, stratigraphic and tectonic divisions of India - geomorphological (surface) processes – weathering – types , weathered products, assessment of degree of weathering , Fluvial processes, glaciation, wind action, and their significance in Civil Engineering</p> <p>Unit-II: Mineralogy and Petrology: Physical properties of minerals – classification - study of important rock forming minerals – Quartz family, feldspar family, Augite, Hornblend, Mica family, calcite, Iron oxide minerals, Augite, Hornblend, and Clay minerals and their behaviour and significance in the field of Civil Engineering . Classification of rock - mode of formation - distinction between igneous, sedimentary and metamorphic rocks. Formation, textures, structure, Classification, and Engineering, Characteristic of rocks. Study of imp rocks granite, syenite, diorite, gabbro, pegmatite, dolerite , basalt , sand stone, limestone, shale, breccia , conglomerate , gneiss, quartzite, marble, slate, schist, phyllite and conglomerate</p> <p>Unit -III: Strength Behavior of Rocks- Stress and Strain in rocks. Concept of Rock Deformation & Tectonics. Dip and Strike. Outcrop and width of outcrop. Inliers and Outliers. Main types of discontinuities according to size. Fold- Types and nomenclature, Criteria for their recognition in field. Faults: Classification, recognition in field, effects on outcrops. Joints & Unconformity; Types, Stresses responsible, geotechnical importance. Importance of structural elements in engineering operations. Consequences of failure as land sliding, Earthquake and Subsidence. Strength of Igneous rock structures.</p> <p>Unit IV: Geological Hazards- Rock Instability and Slope movement: Concept of sliding blocks. Different controlling factors. Instability in vertical rock structures and measures to prevent collapse. . Types of landslide. Prevention by surface drainage, slope reinforcement by Rock bolting and Rock anchoring, retaining wall, Slope treatment. Case study on black clay. Ground water: Factors controlling water bearing capacity of rock. Pervious & impervious rocks and ground water. Lowering of water table and Subsidence. Earthquake: Magnitude and intensity of earthquake. Seismic sea waves. Revelation from Seismic Records of structure of earth. Case Study on Elevation and Subsidence</p> <p>Unit V: Rock masses as construction material: Definition of Rock masses. Main features constituting rock mass. Main features that affects the quality of rock engineering and design. Basic element and structures of rock those are relevant in civil engineering areas. Main types of works connected to rocks and rock masses. Important variables influencing rock properties and behavior such as Fresh rock Influence from some minerals. Effect of alteration and weathering. Measurement of velocity of sound in rock. Classification of Rock material strength. Core logging .Rock Quality Designation. Rock mass description.</p> <p>Unit VI: Geology of dam and reservoir site- Required geological consideration for selecting dam and reservoir site. Failure of Reservoir. Favorable & unfavorable conditions in different types of rocks in presence of various structural features, precautions to be taken to counteract unsuitable conditions, significance of discontinuities on the dam site and treatment giving to such structures.</p>

Fifth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
2	Professional Core courses	BTCE-502-18	Elements of Earthquake Engineering	3	0	0	3
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Course Outcome							
The course will enable the students to:							
i) Appreciate the role of earthquake forces in structural design of building.							
ii) Apply various codal provisions related to seismic design of buildings.							
iii) Acquire new basic knowledge in earthquake engineering							
Content							
Unit 1: Introduction to Earthquakes, Causes of Earthquakes, Basic Terminology, Magnitude, Intensity, Peak ground motion parameters.							
Unit 2: Past Earthquakes and Lessons learnt, Various Types of Damages to Buildings.							
Unit 3: Introduction to theory of Vibrations, Sources of Vibrations, Types of Vibrations, Degree of Freedom, Spring action and damping, Equation of motion of S.D.O.F. systems, Undamped, Damped system subjected to transient forces, general solution, green’s function.							
Unit 4: Lateral Force analysis, Floor Diaphragm action, moment resisting frames, shear walls.							
Unit 5: Concepts of seismic design, Lateral Strength, Stiffness, ductility and structural configuration.							
Unit 6: Introduction to provisions of IS 1893-2002 Part-I for buildings. Estimation of lateral forces due to earthquake.							
Unit 7: Introduction to provisions of IS 4326.							
Unit 8: Introduction to provision of IS 13920.							
Text /Reference Books :							
1. Earthquake Resistant Design of Structures, Pankaj Agrawal, Manish Shrikhande, PHI Learning							

2. Dynamics of Structures: Theory and Applications to Earthquake Engineering, AK Chopra, Prentice Hall
3. Dynamics of Structures, R.W. Clough and Joseph Penzien, McGraw-Hill Education
4. Structural Dynamics by Mario & Paz, Springer.
5. Earthquake Resistant Design by David J. Dowrick, Wiley India Pvt Ltd
6. Elements of Earthquake Engg by Jai Krishna, A.R. Chandrasekaran, Brijesh Chandra, South Asian Publishers.
7. IS 1893-2016 Indian Standard Criteria for Earthquake Resistant Design of Structures.
8. IS 4326-1993 Indian Standard for Earthquake Resistant Design and Construction of Buildings.
9. IS 13920:2016- Ductile design and detailing of Reinforced Concrete Structures subjected to Seismic Forces- code of practice

Fifth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
3	Professional Core courses	BTCE-503-18	Construction Engineering & Management	3	0	0	3
<p>External Marks: 60, Internal Marks: 40, Total Marks: 100</p> <p>Course Outcome</p> <p>The course will enable the students to:</p> <p>An idea of</p> <p>how structures are built and projects are developed on the field</p> <ol style="list-style-type: none"> i. An understanding of modern construction practices ii. A good idea of basic construction dynamics- various stakeholders, project objectives, processes, resources required and project economics iv. A basic ability to plan, control and monitor construction projects with respect to time and cost v. An idea of how to optimise construction projects based on costs vii. An idea how construction projects are administered with respect to contract structures and issues. viii. An ability to put forward ideas and understandings to others with effective communication processes <p>Contents</p> <p>Unit 1: Basics of Construction- Unique features of construction, construction projects types and features, phases of a project, agencies involved and their methods of execution;</p>							

Unit 2: Construction project planning- Stages of project planning: pre-tender planning, pre-construction planning, detailed construction planning, role of client and contractor, level of detail. Process of development of plans and schedules, work break-down structure, activity lists, assessment of work content, concept of productivities, estimating durations, sequence of activities, activity utility data; Techniques of planning- Bar charts, Gantt Charts. Networks: basic terminology, types of precedence relationships, preparation of CPM networks: activity on link and activity on node representation, computation of float values, critical and semi critical paths, calendaring networks. PERT- Assumptions underlying PERT analysis, determining three time estimates, analysis, slack computations, calculation of probability of completion

Unit 3: Construction Methods basics: Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs; conventional framed structure with blockwork walls; Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.

Unit 4: Construction Equipment basics: Conventional construction methods Vs Mechanized methods and advantages of latter; Equipment for Earthmoving, Dewatering; Concrete mixing, transporting & placing; Cranes, Hoists and other equipment for lifting; Equipment for transportation of materials. Equipment Productivities.

Unit 5: Planning and organizing construction site and resources- Site: site layout including enabling structures, developing site organization, Documentation at site; Manpower: planning, organizing, staffing, motivation; Materials: concepts of planning, procurement and inventory control; Equipment: basic concepts of planning and organizing; Funds: cash flow, sources of funds; Histograms and S-Curves. Earned Value; Resource Scheduling- Bar chart, line of balance technique, resource constraints and conflicts; resource aggregation, allocation, smoothening and leveling. Common Good Practices in Construction.

Unit 6: *Project Monitoring & Control*- Supervision, record keeping, periodic progress reports, periodical progress meetings. Updating of plans: purpose, frequency and methods of updating. Common causes of time and cost overruns and corrective measures. Basics of Modern Project management systems such as Lean Construction; Use of Building Information Modelling (BIM) in project management; Quality control: concept of quality, quality of constructed structure, use of manuals and checklists for quality control, role of inspection, basics of statistical quality control. Safety, Health and Environment on project sites: accidents; their causes, effects and preventive measures, costs of accidents, occupational health problems in construction, organizing for safety and health.

Unit 7: *Contracts Management basics*: Importance of contracts; Types of Contracts, parties to a contract; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price. Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Dispute Resolution methods.

Unit 8: *Construction Costs: Make-up of construction costs*; Classification of costs, timecost trade-off in construction projects, compression and decompression.

6. Plumbing Engineering. Theory, Design and Practice, S.M. Patil, 1999
7. Integrated Solid Waste Management, Tchobanoglous, Theissen & Vigil. McGraw Hill Publication
8. Manual on Sewerage and Sewage Treatment Systems, Part A, B and C. Central Public Health and Environmental Engineering Organization, Ministry of Urban Development

Fifth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
5	Professional Core courses	BTCE-505-18	Structural Engineering	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Course Outcome							
The course will enable the students to:							
i. The students will be able to apply their knowledge of structural mechanics in addressing design problems of structural engineering							
ii. They will possess the skills to analyse and design concrete and steel structures							
iii. They will have knowledge of structural engineering							
Unit 1: Introduction							
Structural Engineering, role of structural engineer, engineer, architect, builder; Objectives of designing a structure,safety,sustainable development in performance.							
Unit 2: Structural Analysis							
Concept of determinacy and indeterminacy, Analyses of indeterminate beams, frames and trusses using Slope deflection method, Moment distribution method, unit load method and castiglano's theorem.							
Unit 3: Design of concrete Elements							
Design Philosophies of Working Stress Method and Limit State Method, Design of Reinforced Concrete Beams for Flexure, Shear; Bond, Anchorage, development length and torsion; Reinforced Concrete Axially Loaded Columns. Reinforced Concrete Slabs: One Way and Two Way.							

Unit 4: Design of Steel Elements

Properties of structural steel, I.S. rolled sections, I.S. specifications; Connections- Bolted and welded connections for axial loads; Tension members: Design of members subjected to axial tension; Compression members: Design of axially loaded members, built-up columns, laced and battened columns; Flexural members: Design of laterally restrained and un-restrained rolled section beams.

				L	T	P	
6	Professional Core courses [#]	BTCE-506-18	Geotechnical Engineering[#]	3	0	0	3
<p><i>After studying this course, students shall be able to:</i></p> <ol style="list-style-type: none"> 1. Comprehend the various geotechnical field challenges and understand their fundamental, index and engineering properties and then use (apply) the soil as an engineering material. 2. Investigate and write the laboratory reports for soil design properties and parameters by apply the concept of permeability, total and effective stress approaches in soil strength determination 3. Apply the various specifications of compaction of soils in the construction of highways and earthen dams. 4. Able to apply the knowledge of consolidation, soil deformation parameters, and calculate settlement magnitude and rate of settlement. 5. Design the embankment slopes and check the stability of finite slopes. <p>Unit-I:Basic Concepts- Definition of soil, Comparison between soil mechanics, rock mechanics and geotechnical engineering, Scope of soil mechanics problems in Civil Engineering. Principal types of soils in India. Characteristics of main Clay mineral groups. Soil as three phase system: weight volume relationship and determination of moisture content from nuclear method, alcohol method and sensors. Determination of Specific gravity by density bottle method, pycnometer method. Field density from sand replacement method and other methods.</p> <p>Index Properties: Grain size analysis. Stokes's law and Hydrometer analysis. Consistency and sensitivity of Clay, Atterberg Limits, Flow Index and Toughness Index. Underlying theory of shrinkage limit determination. Classification of coarse and fine grained soils as per Indian Standard.</p> <p>Unit-II :Permeability of Soil- Darcy's law, validity of Darcy's law. Determination of coefficient of permeability: Laboratory method: constant-head method, falling-head method. Field method: pumping- in test, pumping- out test. Permeability aspects: permeability of stratified soils, factors affecting permeability of soil. Seepage Analysis- Introduction, stream and potential functions, characteristics of flow nets, graphical method to plot flow nets.</p> <p>Effective Stress Principle- Introduction, effective stress principle, nature of effective stress, effect of water table. Fluctuations of effective stress, effective stress in soils saturated by capillary action, seepage pressure, quick sand condition.</p> <p>Unit-III:Compaction of Soil-Introduction, theory of compaction, laboratory determination of optimum moisture content and maximum dry density. Compaction in field, compaction specifications and field control.</p> <p>Consolidation of Soil - Introduction, comparison between compaction and consolidation, initial, primary & secondary consolidation, spring analogy for primary consolidation, interpretation of consolidation test results, Terzaghi's theory of consolidation, Concept of various consolidation characteristics i.e. a_v, m_v and c_v, primary and secondary consolidation concept of c_v, tv & U. Consolidation test: determination of c_v from curve fitting methods, Pre consolidation pressure determination. Normally consolidated and over consolidated clays. Causes of over-consolidation. Effect disturbance on e-Log σ curves of normally consolidated clays, importance of consolidation settlement in the design of structures. final settlement of soil deposits, computation of consolidation settlement and secondary consolidation.</p> <p>Unit-IV: Shear Strength- Mohr circle and its characteristics, principal planes, relation between major and minor principal stresses, Mohr-Coulomb theory, types of shear tests: direct shear test, merits of direct shear test, triaxial</p>							

compression tests, test behaviour of UU, CU and CD tests, pore-pressure measurement, computation of effective shear strength parameters. unconfined compression test, vane shear test

Stability of Slopes- Introduction, types of slopes and their failure mechanisms, factor of safety, analysis of finite and infinite slopes, wedge failure Swedish circle method, friction circle method, stability numbers and charts

6th Semester Syllabus

B. Tech Civil Engineering

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses [#]	BTCE-601-18	Engineering Economics, Estimation & Costing	3	1	0	4

Course outcomes: On completion of the course, the students will:

1. Have an idea of basic principles and elements of economics in general.
2. Be able to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives.
3. Be able to understand the technical specifications for various works to be performed for a project and how they impact the cost of a structure.
4. Be able to quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure.
5. Be able to understand how competitive bidding works and how to submit a competitive bid proposal.

Unit-1: Basic Principles of Economics
Demand/Supply – elasticity – Basic Macroeconomic Concepts (including GDP/GNP/NI/ Disposable Income), Aggregate demand and Supply (IS/LM), Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes.

Unit-2: Elements of Business/Managerial Economics
Cost & Cost Control -Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money.

Unit-3: Estimation / Measurements for various items
Introduction to the process of Estimation; Use of relevant Indian Standard Specifications for the same, taking out quantities from the given requirements of the work, comparison of different alternatives, Bar bending schedules, Mass haul Diagrams, Estimating Earthwork and Foundations, Estimating Concrete and Masonry, Finishes, Interiors, MEP works; BIM and quantity take-offs; adding equipment costs; labour costs; rate analysis; Material survey-Thumb rules for computation of materials requirement for different materials for buildings, percentage breakup of the cost, cost sensitive index, market survey of basic materials. Use of Computers in quantity surveying.

Unit-4: Specifications

Types, requirements and importance, detailed specifications for buildings, roads, minor bridges and industrial structures.

Unit-5: Rate analysis:

Purpose, importance and necessity of the same, factors affecting, task work, daily output from different equipment/ productivity.

Unit-6: Tender:

Preparation of tender documents, importance of inviting tenders, contract types, relative merits, prequalification. general and special conditions, termination of contracts, extra work and Changes, penalty and liquidated charges, Settlement of disputes, R.A. Bill & Final Bill, Payment of advance, insurance, claims, price variation, etc. Preparing Bids- Bid Price build-up: Material, Labour, Equipment costs, Risks, Direct & Indirect Overheads, Profits; Bid conditions, alternative specifications; Alternative Bids. Bid process management.

Unit-7: Introduction to Acts:

Acts pertaining to-Minimum wages, Workman's compensation, Contracts, Arbitration, Easement rights.

Text/Reference Books:

SYLLABUS FOR BASKET OF ELECTIVE COURSES

Track-1

Geotechnical Engineering

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses	PECE-602A-18	Foundation Engineering	3	1	0	4
<p>Course Outcome: On completion of this course, the students will be able to</p> <ol style="list-style-type: none"> 1 - Understand the methods of surface and subsoil exploration and to prepare investigation report. 2 - Estimate the stresses in soils and bearing capacity of soil for shallow foundation. 3 - Design various types of shallow foundation and to estimate settlement. 4 - Apply the concepts of deep foundation and solve problems related with pile foundation. <p>Unit-I :Soil Exploration Object of soil investigation for new and existing structures. Depth of exploration for different structures. Spacing of bore Holes. Methods of soil exploration and relative merits and demerits. Types of soil sample. Design features of sampler affecting sample disturbance. Essential features and application of the following types of samples- Open Drive samples, Stationery piston sampler, Rotary sampler, standard penetration test - static and dynamic cone penetration test, Bore Hole log for S.P.T. Geophysical exploration by seismic and resistivity methods</p> <p>Stresses Distribution: Boussinesq equation for a point load, uniformly loaded circular and rectangular area, Newmark's chart and its construction. 2:1 method of load distribution. Comparison of Boussinesq and Westergaard analysis for a point load. Pressure Bulb and Isobar. Related Numerical Problems</p> <p>Unit-II: Earth Pressure Terms and symbols used for a retaining wall. Movement of all and the lateral earth pressure. Earth pressure at rest. Rankine states of plastic equilibrium, K_a and K_p for horizontal backfills. Rankine's theory both for active and passive earth pressure for Cohesionless backfill with surcharge and fully submerged case. Cohesive backfill condition. Coulomb's method for cohesion less backfill. Merits and demerits of Rankine and Coulomb's theories, Culmann's graphical construction (without surcharge load).</p> <p>Unit-III: Shallow Foundation Type of shallow foundations, Depth and factors affecting it. Definition of ultimate bearing capacity, safe bearing capacity and allowable bearing capacity. Rankine's analysis and Terzaghi's analysis. Types of Shear failures. Factors affecting bearing capacity. B.I.S. recommendations for shape, depth and inclination factors. Plate Load test and standard penetration Test. Causes of settlement of structures, Comparison of immediate and consolidation settlement, calculation of settlement by Plate load Test and Static Cone penetration test data. Allowable settlement of various structures according to I.S. Code.</p> <p>Unit-IV: Pile Foundations Types and function of pile - factors influencing the selection of pile - carrying capacity of single pile in cohesionless and cohesive soil by static formula. Determination of point resistance and frictional resistance of a single pile by Static formulas. Piles in Clay, Safe load on a Friction and point Bearing pile- dynamic formulae</p>							

(Engineering News and Hileys) Types of pile driving hammers & their comparison. Limitations of pile driving formulae. Negative skin friction - Carrying capacity of Pile group - Pile load test Cyclic Pile Load Test, Separation of skin friction and point resistance using cyclic pile load test.

Pile in sand, Spacing of piles in a group, Factors affecting capacity of a pile group, Efficiency of pile group by converse – Labare formula and feeds formulas. Bearing capacity of a pile group in clay by block failure and individual action approach. Calculation of settlement of friction pile group in clay. Settlement of pile groups in sand, Negative skin friction. Related Numerical problems

Well foundations-shapes, depth of well foundations, components, factors affecting well foundation design, Scour Depth, construction procedure, sinking of wells, rectification of tilts and shifts, recommended values of tilts & shifts as per I.S.3955.

	Professional Core courses [#]	PECE-602E-18	Geo Environmental engineering	3 [#]	1	0	4
<p>UNIT I Soil Contamination: Introduction to Geo environmental engineering, Development of environmental geotechnologysources, Environmental cyclesproduction and classification of waste, Waste Containment. Contaminant's movements in soil, Contaminant transport in sub surface : advection, diffusion, dispersion, governing equations.</p> <p>UNIT II Groundwater contamination, Water quality standards, Sources of contamination, Hydro chemical behavior of contaminants - Trace metals - Trace nonmetals - Nitrogen, organic substances - Measurement of parameters - Velocity - Dispersivity - chemical partitioning</p> <p>UNIT III Remediation of contaminantsfrom soil and Ground water: contaminant transformation: sorption, biodegradation, ion exchange, precipitation: ex-situ and in-situ remediation – solidification, bio–remediation, soil washing, electro kinetics, soil heating, verification, bio venting, Ground water remediation – pump and treat, air spraying, reactive well.</p> <p>UNIT IV</p>							

Solid waste disposal and stabilization: Hazardous waste control and storage system 3 mechanism of Stabilization, incineration, organic and inorganic stabilization reutilization of solid waste for soil improvement.

UNIT V

Engineered landfill: Site selection, dumping, Design of landfill: CNS layer, leachate and air collection units, Case studies. CPCB rules and regulations on waste handling and management - Criteria for selection of sites for waste disposal - Disposal techniques -Disposal systems for typical wastes.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE -602F-18	Rock Mechanics	3	1	0	4
<p>Course Outcome: On completion of this course, the students will be able to:</p> <ol style="list-style-type: none"> 1 Identify the problems associated with underground excavations 2 Classify the rock mass using the reference data 3 Understand the failure criteria of rock 4 Determine in-situ stresses from field test data <p>UNIT I: Introduction</p> <p>Importance of rock mechanics, composition of rocks, geological and lithological classification of rocks, classification of rocks</p>							

for engineering purposes, R.Q.D. method of classification of rocks. Theories of Brittle failure.

UNIT II: Laboratory Testing of Rocks

Various methods of obtaining rock cores, methods of sample preparation, methods of removing end friction of the rock samples. Compression testing machine, uniaxial compression strength of rock samples, methods of finding tensile strength-direct and indirect methods, Brazilian test, shear box test, triaxial shear test, punch shear test

UNIT III: In-situ Testing of Rocks

Field direct shear test on rock blocks, field triaxial strength, use of flat jacks, chamber test, plate load test, cable jacking test.

UNIT IV: Stress Evaluation in Field Stress-

relief technique(over coring), use of strain gauges, bore hole, deformation cell, photoelastic stress meter, stress measurement with flat jack. Hydraulics Fracturing Techniques.

UNIT V: Stabilization of Rocks

Rock bolting, principle of rock bolting, various types of rock bolts, application of rock bolting. Field testing of rock bolts and cable anchors.

UNIT VI: Elastic and Dynamic

Properties of Rocks Stress-strain behaviour dynamic properties, resonance method and ultra-sonic pulse method.

UNIT VII: Pressure on Roof of Tunnels

Trap door experiment, Terzaghi's theory, Bierhaumer, kommerel, Protodyakanov theory.

UNIT VIII: Stress Around the Tunnels

Basic design and Principles of tunnels in rocks, design of pressure tunnels in rocks.

Reference Books

- 1 Lama, et.al Rock Mechanics, Vol.I,II,III,IV

SYLLABUS FOR BASKET OF ELECTIVE COURSES

Track-1I

Structural Engineering

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE - 603A-18	Design of Concrete Structures	3 [#]	1	0	4

Course outcomes: On completion of this course the students will be able:

1. To apply the loads on building frames and analyse them using direct and indirect methods.
2. To analyse the concrete components i.e. continuous beams, flat slabs, tanks and retaining walls, etc
3. To design and detail the concrete components i.e. curved beams, flat slabs, tanks and retaining walls, etc
4. To analyse and design the special foundations i.e. raft, pile and machine foundations.

Unit-I: Building frames:

Types, Analysis for vertical loads (Kani's method, Substitute frame method), Analysis for lateral loads (Portal and Cantilever), concept of redistribution of moments, design and detailing of various components (continuous beams and columns with uni or bi-axial bending)

Unit-II: Liquid retaining structures:

Introduction, Design criteria, Design of rectangular and circular concrete water tank resting on ground, Design of Intze tank, Staging for overhead tank.

Unit-III: Flat slabs:

Advantages and disadvantages of flat Slabs, basic action of Flat Slabs, Direct Design Method, Equivalent frame method, Codal provisions

Unit-IV: Design of special structures:

Retaining walls- cantilever and counter-fort type, curved beams (IS code method).

Unit-V: Foundations:

Design of raft foundation, pile foundation; Introduction to machine foundation, vibration characteristics, design consideration of foundation to rotary machine and impact machine.

Note: Design as per the relevant IS codes.

Reference Books:

1. Reinforced Concrete Design; Pillai & Menon; Tata McGraw-Hill Education
2. Advanced Reinforced Concrete design; Varghese P C; PHI Pvt.Ltd.
3. Advanced Reinforced concrete design, Krishnaraju
4. Jain, A.K., Reinforced Concrete-Limit State Design, Nem Chand & Bros
5. Advanced RCC Design, SS Bhavikatti.
6. Design of concrete structures, B C Punmia
7. Prestressed concrete by Krishna Raju, TMH

BIS Codes of practice and Design Handbooks:

1. *IS 456-2000*- Indian Standard. Plain and Reinforced concrete -Code of practice
2. *IS 3370- Code of practice for concrete structures for storage of liquids
3. *IS 1343-2012- Code of practice for Prestressed concrete
4. *Design Aid SP 16

Note: The codes marked with * are permitted in examination.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	p	
	Professional Core courses [#]	PECE-603D-18	Structural Analysis and Design	3 [#]	1	0	Professional Core courses [#]
Course Outcomes: On completion of this course the students will be able: 1. To understand and determine the indeterminacy of different types of structures. 2. To calculate forces and moments in indeterminate structures due to static as well as moving loads. 3. To analyse and design concrete structures i.e. column subjected to moments, foundations, retaining walls, etc. 4. To analyse and design the steel structures i.e. column bases, beam-column joints, plate girders and roof trusses.							
Unit-I: Review of indeterminacy: Static and kinematic indeterminacies of beams, rigid-jointed and pin-jointed plane frames.							
Unit-II: Analysis of indeterminate structures: Analysis indeterminate beams and frames by Kani's method, Theorem of three moments and other approximate methods- Portal, Cantilever and Substitute frame method.							
Unit-III: Moving loads and influence lines: Analysis of moving Loads for determinate beams, Influence lines for indeterminate beams, trusses and frames. Muller Breslau principle.							
Unit-IV: Design of Concrete structures: Columns with moments: Design of short columns with uni-axial and bi-axial bending; Design of Long columns, use of design charts; Foundations: Isolated and combined footing for columns; Staircases, Introduction, types and design; Retaining walls - Cantilever and Counter-forte type retaining wall.							
Unit-V: Design of Steel Structures: Column bases: Slab base, Gusseted base; Beam-column connections: bracket connections, seated and framed connections.; Plate girders: Elements of a plate girder, design of plate girder section, intermediate and bearing stiffeners, Roof trusses: Types, Design loads, design of members and joints.							
Reference Books 1 Basic structural analysis - C.S. Reddy Tata McGraw-Hill 2. Intermediate structural analysis - C . K. Wang. McGraw Hill 3. Structural analysis - S Ramamurtham, 4. Reinforced Concrete Design; Pillai & Menon; Tata McGraw-Hill Education 5. Limit state Design of Reinforced Concrete; Varghese P C; PHI Pvt.Ltd. 6. Design of concrete structures, B C Punmia 7. Limit state design of steel structures: S K Duggal, TMH 8. Design of steel structures: N Subramanian, Oxford publications 9. Design of steel structures (by limit state method as per IS: 800-2007), S S Bhavikatti							
BIS Codes of practice and Design Handbooks:							

1. *IS 456-2000- Indian Standard. Plain and Reinforced concrete -Code of practice
2. *Design Aid SP 16.
4. *IS 800: 2007 (General construction in steel-Code of practice)
- 5.* IS 875-2015 Part -3 [Design loads (other than earthquake) for buildings and structures — code of practice- wind loads]
6. *SP: 6(1) (Handbook for structural engineers-Structural steel sections)

Note: The codes marked with * are permitted in examination.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses [#]	PECE-603E-18	Prestressed Concrete	3 [#]	1	0	4
<p>Course outcome: On completion of this course the student will be able to:</p> <ol style="list-style-type: none"> 1. Recognize the materials for prestressed concrete and its properties, advantages and applications in contrast to normally reinforced concrete. 2. Comprehend the concept of pre-tensioning and post-tensioning of prestressed concrete, types of prestressed members, prestressing systems and its components. 3. Analyse the prestress, its losses, and determine the strength of a prestressed concrete sections using Indian Standards (IS) guidelines under flexure, shear and torsion. 4. Evaluate the strength and serviceability requirements of different prestressed concrete members i.e. beams, slab and anchor blocks. 5. Design the sections and the reinforcement for prestressed concrete beams, prestressed slabs and anchorage zones as per the IS specifications. <p>Unit-I: Materials for prestressed concrete Introduction to prestressing concrete; High strength concrete- strength, creep and shrinkage, permissible stresses; High tensile prestressing steel –treatments, forms of prestressing steel, strength, relaxation of steel, permissible stresses.</p> <p>Unit-II: Prestressing devices and systems Types of prestressing, tensioning devices and equipments, pre-tensioning systems, post- tensioning systems (advantages and disadvantages, procedure, applications)</p> <p>Unit-III: Analysis of prestress and bending stresses Analysis of prestress, resultant stresses at a section, pressure line or thrust line concept and internal resisting couple, concept of load balancing, losses of prestress, deflection of beams.</p>							

Unit-IV: Strength of prestressed concrete sections

Types of flexural failure, strain compatibility method, IS:1343 code procedure for flexural strength, design for limit state of shear and torsion and codal provisions for detailing.

Unit-V: Design of prestressed concrete beams and slabs

Transfer of prestress in pre tensioned and post tensioned members, design of anchorage zone reinforcement, design of simple beams/girders, cable profiles, design of slabs.

Reference Books

2. T.Y. Lin, Ned H. Burns, Design of Prestressed Concrete Structures, John Wiley & Sons.
3. P. Dayaratnam, Prestressed Concrete, Oxford & IBH
4. R. Rajagopalan, Prestressed Concrete.

BIS Codes of practice

1. * IS 1343 2012, Code of Practice for Prestressed Concrete
2. * IS 456-2000, Code of practice for design of reinforced concrete

Note: The codes marked with * are permitted in examination.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE-603F-18	Bridge Engineering	3 [#]	1	0	4

Course Outcomes: On completion of this course the student will be able:

1. To evaluate the basic design considerations for different types of bridge structure.
2. To analyse the concrete and steel bridges as per the various loading standards of India.
3. To design the main structure of the concrete and steel bridges.
4. To design the various types sub-structure and bearings for a bridge.
5. To demonstrate the various construction and maintenance methods for a bridge structure.

Unit-I: Planning and General design consideration

Classification of bridges, Factors considered for planning of Concrete and Steel Bridges site selection; Design consideration - geometric and hydraulic considerations, optimum spans; Design aids and Codes of practice, loading standards for highway and railway bridges (IS, IRC, RDSO, AASHTO).

Unit-II: Concrete Bridges

Culverts; Slab, T-beam, box girder bridges, balanced cantilever bridge, arch bridge; Bridge deck and approach slabs - Slab design methods - bridge deck systems - Slab-beam systems - Box girder systems - Detailing of box girder systems. (not design), Special requirements for Prestressed Concrete bridges.

Unit-III: Steel Bridges

Plate girder bridge, truss bridge, suspension cable bridge, cable stayed bridge; Analysis and design of Truss bridge and plate girder bridge

Unit-IV: Substructures:

Design of Piers - Columns and towers; Caissons, pile and well foundations; abutments and retaining walls.

Unit-V: Bearings and expansion joints

Types and functions of bearings, design of elastomeric bearings, rocker and roller type bearings, general requirements for provisions of expansion joints.

Unit-VI: Construction techniques and maintenance

Construction techniques: Cast in-situ, Prefabricated, Incremental launching, Free cantilever construction, provisions for inspection and maintenance.

Note: Design as per the relevant IS, IRC codes and guidelines for bridges.

Reference Books

5. D.J. Victor, "Essentials of Bridge Engineering," Oxford & IBH Publishing, New Delhi, 2001.

BIS Codes of practice and Design Handbooks:

- 1) IS 800: 2007 (General construction in steel-Code of practice)*
- 2) SP: 6(1) (Handbook for structural engineers-Structural steel sections)*
- 3) IS 456:2000 Code of practice for design of concrete structures*
- 3) Relevant IRC and IS guidelines for bridge design.

Note: The codes marked with * are permitted in examination.

***SYLLABUS FOR BASKET OF ELECTIVE
COURSES
Track-III***

Construction Engineering.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE-604A-18	Construction Equipment & Automation	3	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Course Outcomes

1. Understand Equipments & Automation and key features of its performance
2. Know automation systems in detail, including its evolution, objectives, criteria, levels of benefits, and shortcomings
3. Know a series of case studies representing diverse project types, sizes, certification levels, and climate regions
4. Know what are innovations in construction equipments

Content

UNIT-I : Construction Equipment

Introduction, significance of equipment in construction industry - laboratory setting including plan reading, specification reading, construction scheduling and estimating, Job layout and its importance. Study of equipments with reference to available types and their types and their capacities, factors affecting their performance.

UNIT – II: Construction Equipment Management

Equipment Management- Introduction, Differences between men and manpower, Extent of Mechanisation, Equipment planning, Selection of equipment, Forward planning, Purchase of Equipment, Specifications for ordering equipment

Unit –III: Equipment for Earthwork

Fundamentals of Earth Work Operations - Earth Moving Operations - Types–Excavation equipment- Power Shovels, Back Hoe, Drag line, Clamshell – Scrapers, Bull Dozers, Tractors, Hauling Equipment – Dump trucks, Dumpers Loaders, trucks, Earth Compaction Equipment-Tamping Rollers, Smooth Wheel Rollers, Sheepsfoot Roller, Pneumatic-tyred Roller, Vibrating Compactors, Vibrocompaction methods.

UNIT-IV: Other Construction Equipment

:Pile driving Equipment - Erection Equipment – Cranes, Derrick Cranes, Mobile cranes, Overhead cranes, Traveller cranes, Tower cranes - Types of pumps used in Construction - Grouting - Material Handling Conveyors –Industrial Trucks, Forklifts and related equipment.

Unit-V : Equipment for Concrete and Road laying

Aggregate production equipment- Different Crushers – Feeders - Screening Equipment -Handling Equipment - Batching and Aggregate Mixing Equipment - Asphalt Plant, AsphaltPavers, Asphalt compacting Equipment – Ready mix concrete equipment, Concrete mixers,Concrete batching and mixing plant, Transportation of concrete mix, Concrete pouring and pumps, concrete compaction equipment.

UNIT-VI: Automation:

Introduction & Technical terms of Automation and robotics; advantages & disadvantages,Need for construction automation, Applications, Automation in precast construction industry, Autonomous Machines on the Construction Site, Drones to Survey Working Areas , Robotics in Concrete Works, IoT Sensors to Collect and Process Data, Virtual Reality During Project Planning and Training , Automatic Concrete Screeding Machine, Concrete Surface Finishing Robot, Automation in High Rise Building Construction, Automation in prefabrication of masonry and on site masonry construction, partially automated masonry element prefabrication, automated manufacture of brick wall masonry blocks, Automation in timber construction, Automation in production of steel components, Transformable welding robot.

3. Deodhar, S.V. "Construction Equipment and Job Planning", Khanna Publishers, New Delhi, 1988.
4. Dr. Mahesh Varma, "Construction Equipment and its planning and Application", Metropolitan Book Company, New Delhi, 1983.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses [#]	PECE-604B-18	Sustainable Construction Methods	3 [#]	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Course Outcomes:

1. Create new engineering materials to improve the performance of infrastructure
2. Characterize and mitigate natural and man-made hazards
3. Improve fundamental knowledge of the inter-relationships between the built environment and natural systems.
4. Develop the technological innovations needed to safeguard, improve, and economize infrastructure

Content

UNIT-I : INTRODUCTION

Definitions- Various types - Pillars of Sustainability - Circle of Sustainability - Need - systems and their sustainability - Green Buildings -Difference between Green and Sustainability - Climate Change, Global warming - National and International policies and Regulations. Identification of cutting edge sustainable construction materials, technologies, and project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity.

UNIT – II: BUILDING CONSTRUCTION METHODS

Conventional vs modular construction methods, development , Engineering principles, benefits, Modular construction methods for repetitive works, Green Roofs, Cool Roofs, Passive House, Rammed Earth Brick, Passive Solar, Greywater Plumbing Systems, Solar Thermal Cladding, Solar Power, Water Efficiency Technologies, Sustainable Indoor Environment Technologies.

UNIT –III: PRECAST CONSTRUCTION METHODS

Modular construction methods for repetitive works; Precast concrete construction methods; Benefits , Sustainability in Concrete Mix Design, Greener, Faster and Sustainable Construction Practices Through Precast Solutions, Use of secondary cementitious material (SCM's) like GGBS, fly ash, ultra-fine GGBS in the production of the concrete, Basics of Slip forming for tall structures, Structural 3D Printing, Self-healing Concrete, Green Insulation, Sustainable Resource Sourcing, Environmental Sustainability Benefits From Precast Concrete.

UNIT-IV: CONSTRUCTION METHODS OF BRIDGES

Types of foundations and construction methods; Basics of Formwork and Staging; Proactive Maintenance, Prefabrication/Modular Construction, balance between environment and construction activities, reducing problems at site with minimal staging, increasing safety etc, Constructions are sustainable with reduced use of natural resources, Costs of Construction/Assembly and Transportation, Lifespan, Environmental Impact, harmful emissions during bridge construction, Reducing waste, solar panels to power LED lights to illuminate its deck, water-powered light system powered by the currents of the river, development that meets the needs of the present.

UNIT-V: NEW CONSTRUCTION MATERIALS TECHNOLOGIES Introduction to new construction materials & technologies, Synthetic Roof Underlayment, Electro chromic Glass, Biodegradable Materials, Reduction of water consumption, Impact on environment, Concepts of climate responsive building,

Sustainability assessment using standard approaches- LEED/GRIHA rating evaluation process

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE-604E-18	Contract Management	3	1	0	4

Course Outcomes:

To make Civil Engineering students able to analyze, evaluate and design construction contract documents.

UNIT I: Construction Contract:
Terminology, Importance, Agreement, Contract, essential conditions, Elements, nature, Features, Suitability. Subcontracts and supply contracts, Indian Contracts Act. Types of contract: Lump sum contract, Item rate contract, Cost plus fixed fee contract, Cost plus percentage contract, Special contracts.
Execution of Works: Direct execution by Department, Muster Roll, Piece work Agreement, Work Order.

UNIT II: Construction Specifications
Standard specifications, general specification, development, interpretation. Tender and tender documents: tender form, Types of bidding, tender notice, tendering procedure, submission and opening of tender.

UNIT III: Contract document
Design of Contract Documents –Contract document: Drafting of clauses, development, and interpretation, CPWD conditions of contract, FIDIC conditions of contract. International Contract Document, Standard Contract Document.

UNIT IV: Construction claims
Extra item, excess quantity, deficit quantity, price escalation. Dispute resolution mechanism: litigation, arbitration, conciliation, mediation, dispute resolution board. Contractual Problems: Possible contractual problems, creation of claims, development of disputes.

BOT contract: Types of contract, PPP framework, types of risk, concession agreement, drafting of clauses, development, and interpretation.

UNIT V: Legal requirements
Labour Laws, Child Labour Act, Sales Tax, VAT, Service Tax, Excise Duty, Laws relating to Wages, Bonus and Industrial

Disputes, Labour Administration, Insurance and Bonding, Insurance and Safety Regulations.

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Professional Core courses [#]	PECE-604F-18	Construction Engineering Materials	3	1	0	4

Course Outcomes: On completion of this course the student will be able

- To Provides a broad understanding of the composition, microstructure, and engineering behavior of various materials used in civil engineering applications.
- To Introduces various modifications possibilities in construction materials.
- To Understand and Explain Special Concrete.

Unit-I: Construction Materials

Classifications of Construction Materials. Consideration of physical, Mechanical, thermo-physical Properties, characteristics behaviour under stress, Selection criteria for construction materials, green building materials.

Unit-II: Materials for making Mortar and concrete

Lime manufacture, properties, hardening of lime, types of lime, lime concrete uses. Cement, pozzolanic material, aggregates, water, admixtures - characteristics, properties and uses .Types of mortars, special mortars, their properties and applications. Ceramic Materials: Classification, Refractories, glass, glass wool, mechanical, thermal and electrical properties, fire resistance materials, Uses and application.

Unit-III: Polymers in civil engineering

Rubber and plastics, properties, effect of temperature on mechanical properties. Uses and application. Polymers, fibres and composites, Fibre reinforced plastic. Architectural use and aesthetics of composites. Adhesives and sealants. Structural

elastomeric bearings and resilient seating. Moisture barriers, Polymer foams and polymers in Building Physics. Polymer concrete composites.

Unit IV: Metals

Types of structural steels, special steel, alloy steel, stainless steel, light gauge steel, Corrosion of concrete and reinforcing steel in various environments. Electro-chemical process and measures of protection during construction. Ferro-cement, composition and properties.

Unit V: Modified Materials

Modified bitumen using plastic or polymers, Modified cement concrete using various industrial ashes, soil stabilised using slag, polymers - their properties, advantages and applications as per Indian conditions.

Unit-VI: Special concretes

Concretes, Behaviour of concretes – Properties and Advantages of High Strength and High Performance Concrete – Properties and Applications of Fibre Reinforced Concrete, Self- compacting concrete, Alternate Materials to concrete on high performance & high Strength concrete.

Mandatory Course

Sixth Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
	Mandatory Course (Non Credit)	BTMC-101-18	Constitution of India	3	0	0	S/US

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the “basic structure” of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of “Constitutionalism” – a modern and progressive concept historically developed by the thinkers of “liberalism” – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of “constitutionalism” in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

Course content

Meaning of the constitution law and constitutionalism
Historical perspective of the Constitution of India
Salient features and characteristics of the Constitution of India
Scheme of the fundamental rights
The scheme of the Fundamental Duties and its legal status
The Directive Principles of State Policy – Its importance and implementation
Federal structure and distribution of legislative and financial powers between the Union and the States
Parliamentary Form of Government in India – The constitution powers and status of the President of India
Amendment of the Constitutional Powers and Procedure
The historical perspectives of the constitutional amendments in India
Emergency Provisions : National Emergency, President Rule, Financial Emergency
Local Self Government – Constitutional Scheme in India
Scheme of the Fundamental Right to Equality
Scheme of the Fundamental Right to certain Freedom under Article 19
Scope of the Right to Life and Personal Liberty under Article 21

7th & 8th Semester Syllabus

B. Tech Civil Engineering

SYLLABUS FOR BASKET OF ELECTIVE COURSE

Track-1V

Transportation Engineering

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses	PECE -701A-18	Pavement and geometric design of Highways	3	1	0	4

Course Outcome: On the completion of this course the student will be able to

1. Understand patterns of Traffic and its behaviour.
2. Develop an understanding for various sight distances and its affects
3. Analyse and design Horizontal and vertical curves
4. Design the cross-sectional elements for different types of highways.
5. Develop and appreciate the concept of intersections

Suggest the required facilities for pedestrians, bicycles, buses and parking

Unit 1 : Introduction to Design Elements: Objectives and requirements of highway geometric design, Sight distances - types, analysis, PIEV theory, factors affecting, measurements, Horizontal alignment – design considerations, stability at curves, super-elevation, widening, transition curves; curvature at intersections, vertical alignment - grades, ramps, design of summit and valley curves, combination of vertical and horizontal alignment including design of hair pin bends, IRC standards and guidelines for design problems.

Unit 2 : Cross Section Elements: Right of way and width considerations, roadway, shoulders, kerbs traffic barriers, medians, frontage roads; Facilities for pedestrians, bicycles, buses and trucks, Pavement surface characteristics - types, cross slope, skid resistance, unevenness.

Unit 3 : Design of Intersections: Types of Intersections; Design Principles for Intersections; Design of At-grade Intersections –Channelization, Objectives; Traffic Islands and Design standards; Rotary Intersection – Concept, Advantages and Disadvantages; Grade separated Interchanges – Types, warrants and Design standards.

Unit 4: Miscellaneous Elements: Traffic Signs and Markings. Requirements of Pedestrians; Pedestrian facilities on Urban Roads; Cycle Tracks – Guidelines and Design standards; Bus bays –Types and Guide lines; Design of On-street and Off-street Parking facilities – Guidelines for lay out Design,

Books Recommended:

3	Professional Core courses	PECE -701C-18	Intelligent Transportation systems	3	1	0	4
<p>Course outcome: On the completion of this course the student will be able to:</p> <ol style="list-style-type: none"> 1. Understand the concept of Intelligent Transportation system. 2. Analyse ITS's relevance with Smart growth and energy based planning. 3. Conceptualise the urban transportation systems using different models. 4. Explore methodology for smart city based Transit planning 5. Suggest road safety using ITS. <p>Unit 1. Overview of Intelligent Transportation Systems: Introduction to ITS, its history and future, Framework for analysing ITS relationships- Information technology, GPS.</p> <p>Unit 2. Advanced Transportation Planning Process and Problems: Terminology of Transportation Planning, Functional Components, Brief Overview of Models used in Transportation Planning, Environmental concerns, Smart growth and sustainable alternatives, Energy based planning, Global Positioning Systems. Transportation System Impacts: Travel Facilities, Origin and Destination, Transit Surveys, Decision making Process, Transportation Demand Management (TDM). Use of GIS in Transport planning.</p> <p>Unit 3. Land Use Transportation System: Urban system components, Urban Spatial Structure, Location Theory, Land use planning, Land use Models, Land use transport models – (Lowry and Garin), Lowry Models, Transit Oriented Development(TOD).</p> <p>Unit 4. Urban Public Transportation: Urban Growth and Public Transport needs, Transit mode characteristics, transit characteristics, Fleet size and capacity estimation, Smart cities based Transit Planning.</p> <p>Road Safety: Highway safety using ITS.</p> <p>Books recommended:</p> <ol style="list-style-type: none"> 1) Joseph M. Sussman, Perspectives on Intelligent Transportation systems 2) Kadyali, Traffic Engineering and Transport planning, Khanna publishers 							

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
4	Professional Core courses	PECE -701D18	Highway Construction and Management	3	1	0	4
<p>Course outcome: On the completion of this course the student will be able to:</p> <ol style="list-style-type: none"> 1. Understand various materials and techniques used to construct pavements. 2. Design the bituminous pavement as per standards. 3. Design thickness and joints including drainage of concrete pavements. 4. Suggest maintenance of pavement. 5. Conceptualise pavement management systems. <p>Unit 1. Bituminous pavement: Various types of bituminous constructions and their selection, Construction of earth, gravel, water bound macadam, surface dressing, premixed carpet, bituminous macadam, bituminous concrete, mastic asphalt, cement concrete pavements.</p> <p>Design of bituminous mixes: Requirement of bitumen mixes, design of bituminous mixes as per Marshall Stability & flow method, I.R.C & MORTH recommendations for the design mix of various layers of flexible pavements.</p> <p>Unit 2. Concrete pavement: Components of concrete pavement-PQC, various joints- construction joints, longitudinal joints, transverse joint, thermal joints, tie bars, dowels; Construction techniques- alternate bay method, continuous bay method, expansion joint and strip method; slip form paving.</p> <p>Drainage: Introduction, Importance & Principles of Highway Drainage, Surface Drainage, Sub Surface drainage.</p> <p>Unit 3. Highway Maintenance: Introduction, Maintenance of Earth, gravel, WBM Roads, Bituminous Roads, Cement Concrete pavements. Use of Benkelman Beam method, Falling weight deflector-meter.</p> <p>Unit 4. Pavement Management Systems: Concepts of Pavement life cycle, Pavement performance assessment, evaluation of pavement structural capacity and safety, combined measures of pavement quality, development of models for pavement deterioration, rehabilitation and maintenance strategies.</p>							

Books recommended:

1. Khanna S.K. and C.E.G. Justo, “Highway Engineering”, Nemchand Bros, (2002)
2. Kadyali L. R.; Highway Engineering, Nem Chand & Brothers, Roorkee(2002)
3. Haas R.C.G., Hudson W. Ronald., Zaniewski John P., Modern Pavement Management, Krieger Publishing Company, 1994.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
5	Professional Core courses	PECE -701E-18	High Speed Rail Engineering	3	1	0	4

Course Objective: On the completion of this course the student will be able to:

1. Develop an understanding for high-speed Rails.
2. Outline the requirements for design.
3. Design of points, crossing and turnouts.
4. Suggest techniques to mechanize tracks,
5. Analyse signals inter locking devices for high-speed rails.

Unit 1. High Speed Railway(HSR) Engineering: Introduction, Key elements of HSR technology, History and Development of HSR: world and India, High Speed Trains: Present & Future.

Unit 2. Feasibility Studies: Basic traffic and volume feasibility studies related to HSR, Design requirements and construction of aspects of high- speed rail (HSR) passenger transport systems engineering. Geotechnical and structural requirements for track, bridges, viaducts and tunnels.

Unit 3. Geometric design: Alignment, horizontal curves, super elevation, equilibrium, cant and cant deficiency, length of transition curve, gradients and grade compensation. Stations and yards, and their classification.

Points and crossings: introduction, necessity of points and crossings, turnouts, points and crossings, design of a simple turnout.

Unit 4. Track Recording: Requirements for track system, Basic design and construction of HSR stations and rolling stock maintenance facilities. Equipment, Mechanized Maintenance

Basic Signalling and interlocking: objects of signalling, engineering principle of signaling, classification of signalling, control of train movements, interlocking definition, necessity and function of interlocking, methods of interlocking, mechanical devices for inter locking. Traction and tractive resistance, stresses in track, modernization of railway track.

Books Recommended:

1. Arora and Saxena, **Railway Engineering**, Dhanpat Rai & Sons, New Delhi (2006)
2. Rangawala, **Railway Engineering**, Charotar Publishing House, Anan (1989).
3. Aggarwal M.M., and Satish Chandra **Railway Engineering**, Oxford University Press (2002).

				L	T	P	
6	Professional Core courses	PECE -701F -18	Traffic Engineering and Management	3	1	0	4
<p>Course Outcomes: On the completion of this course the student will be able to:</p> <ol style="list-style-type: none"> 1. Understand the traffic flow parameters and measures related to traffic control and management. 2. Analyze the feasibility of different control devices for traffic management. 3. Create the solution of the problem related to traffic congestion and safety. 4. Outline the causes of road accidents and procedure to assess the road safety audit. 5. Apply the methods to identify the black spots and propose the solutions to improve road safety. 6. Assess the need of modernization in traffic management and road safety. <p>Unit 1. Fundamentals of Traffic Management: Principles of Traffic management; Highway capacity and Level of service; Mixed Traffic flow: PCU concept and its limitations; Traffic stream parameters: Interrupted and Uninterrupted flow</p> <p>Unit 2. Traffic Regulation and Control: Road Signs and markings; Channelization; At-grade and Grade separated intersections; Traffic Rotary; Design principles of traffic signals</p> <p>Traffic Management techniques: Regulatory measures for Traffic management; Travel Demand Management; Role of ITS in traffic management.</p> <p>Unit 3. Road accidents: Causes of road accidents: Vehicle design factors & Driver characteristics influencing road safety, Road condition, Parking and its influence on traffic safety.</p> <p>Road safety measures: Accident data collection methods; Representation of accident data: Collision and condition diagram; Methods to Identify and Prioritize Black spots; Road safety: 3 E measures.</p> <p>Unit 4. Road safety audits: Key elements in Road safety audit; Road safety audit procedure and investigations; Role of ITS in Road safety.</p> <p>Books Recommended:</p> <ol style="list-style-type: none"> 1. Fred L. Mannering, Scott S. Washburn. Principles of Highway Engineering and Traffic Analysis. 7th Edition, Wiley, 2019. 2. Kadiyali, L. R., “Traffic Engineering and Transport Planning”, Khanna Publishers 3. Chakroborty Partha and Animesh Das, “Principles of Transportation Engineering”, Prentice hall 4. SYLLABUS FOR BASKET OF ELECTIVE COURSE

Track-V

Environment Engineering

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Core courses [#]	PECE-702A-18	Environmental Law and Policy	3 [#]	1	0	4
Unit 1 Basic Concepts in Environmental Law. An introduction to the legal system; Constitution, Acts, Rules, Regulations; Indian Judiciary, Doctrine of precedents, judicial review, Writ petitions, PIL–liberalization of the rule of locus standi, Judicial activism. Introduction to environmental laws in India; Constitutional provisions, Bhopal gas tragedy; Rio conference. General principles in Environmental law: Precautionary principle; Polluter pays principle; Sustainable development; Public trust doctrine. Overview of legislations and basic concepts.							
Unit 2 Forest, Wildlife and Biodiversity related laws Evolution and Jurisprudence of Forest and Wildlife laws; Colonial forest policies; Forest policies after independence 2 Statutory frame work on Forests, Wildlife and Biodiversity: IFA, 1927; WLPA, 1972; FCA, 1980; Biological Diversity Act, 2002; Forest Rights Act, 2006. Strategies for conservation–Project Tiger, Elephant, Rhino, Module leopard.							
Unit 3 Air, Water and Marine Laws National Water Policy and some state policies Laws relating to prevention of pollution, access and management of water and institutional mechanism: Water Act, 1974; Water Cess Act, 1977, EPA, 1986. Pollution Control Boards Ground water and law Judicial remedies and procedures Marine laws of India; Coastal zone regulations. Legal framework on Air pollution: Air Act,1981; EPA, 1986							
Unit 4 Environment protection laws and large Projects Legal framework on environment protection-Environment Protection Act as the framework legislation–strength and weaknesses; EIA; National Green tribunal The courts infrastructure projects							
Unit 5 Hazardous Substances and Activities Legal framework: EPA and rules made thereunder; PLI Act, 199 Principles of strict and absolute liability							
Reference Books: 1. Birnie P. (2009) et al., International Law and the Environment, 3rd ed., Oxford. 2. Desai A. (2002) Environmental Jurisprudence, 2nd ed., Modern Law House, Allahabad.

				L	T	P	
2	Professional Core courses [#]	PECE-702B-18	Rural water Supply And onsite Sanitation Systems	3 [#]	1	0	4
Syllabus Content: Unit 1 Rural Water Supply: Issues of rural water supply –Various techniques for rural water supply- merits-National rural drinking water program- rural water quality monitoring and surveillance- operation and maintenance of rural water supplies Unit 2 Low Cost Water Treatment: Introduction – Epidemiological aspects of water quality- methods for low cost water treatment-Specific contaminant removal systems Unit 3 Rural Sanitation: Introduction to rural sanitation-Community and sanitary latrines-planning of wastewater							

collection system in rural areas- Ecological sanitation approach – Grey water and storm water management- Compact and simple wastewater treatment systems in rural areas-catch basins-constructed wetlands- roughing filters- stabilization ponds - septic tanks – anaerobic baffled reactors-soak pits- low cost excreta disposal systems- Village ponds as sustainable wastewater treatment system-Wastewater disposal

Unit 4

Solid Waste Management: Disposal of Solid Wastes- Composting- land filling- incineration- Biogas plants- Other specific issues and problems encountered in rural sanitation.

ReferenceBooks:

1. Eulers, V.M., and Steel, E.W., Municipal and Rural Sanitation, 6th Ed., McGraw Hill Book Company, .
2. Wright, F.B., Rural water Supply and Sanitation, E. Robert Krieger Publishing Company, Huntington, New York.

5. CPHEEO, *Manual on Municipal Solid Waste Management, Central Public Health and Environmental Engineering Organization*, Government of India

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
5	Professional Course Courses	PECE-702E-18	EIA and LCA	3	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Unit1

The Need for EIA, Indian Policies Requiring EIA, The EIA Cycle and Procedures, Screening, Scoping, Baseline Data, Impact Prediction, Assessment of Alternatives, Delineation of Mitigation Measure and EIA Report, Public Hearing, Decision Making, Monitoring the Clearance Conditions, Components of EIA, Roles in the EIA Process. Government of India Ministry of Environment and Forest Notification (2000), List of projects requiring Environmental clearance.

Unit2

Key Elements of an Initial Project Description and Scoping, Project Location(s), Risks to Environment and Human Health, Socio-Economic Impacts, Ecological Impacts, Global Environmental Issues. Criteria for the selection of EIA methodology, impact identification, impact measurement, impact interpretation & Evaluation, Methods - Adhoc methods, Checklists methods, Matrices methods, Networks methods,

Unit3

Introduction: Life Cycle Assessment concepts, A brief history of Life-cycle Inventory analysis, overview of methodology, three components, identifying and setting boundaries for life-cycle stages, issues that apply to all stages, Applications of inventory analysis.

Unit 4

Procedural framework of Life-cycle inventory: Introduction, define the purpose and scope of inventory. General issues in Inventory analysis: Introduction, Using Templates, Data issues, special case boundary issues. Product design evaluation and analysis using LCA

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
6	Professional Course Courses	PECE-702F-18	Sustainable Engg and Technologie	3	1	0	4

External Marks: 60, Internal Marks: 40, Total Marks: 100

Unit-1

Introduction:

Sustainability - Introduction, Need and concept of sustainability, Social-environmental and economic sustainability concepts. Sustainable development, Nexus between Technology and Sustainable development, Challenges for Sustainable Development. Multilateral environmental agreements

Unit-2

Global Environmental Issue:

Resource degradation, Climate change, Regional and Local Environmental Issues. Carbon credits and carbon trading, carbon foot print Carbon sequestration – Carbon capture and storage (CCS). Environmental management standards, ISO 14000 series, Life Cycle Analysis (LCA) - Scope and Goal, Bio-mimicking and Protocols

Unit-3

Sustainable Design:

Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design

Unit-4

Clean Technology and Energy

Energy sources: Basic concepts-Conventional and non-conventional, solar energy, Fuel cells, Wind energy, Small hydro plants, biofuels, Energy derived from oceans, Geothermal energy, Rainwater harvesting.

Unit-5

Green Engineering:

Green Engineering concepts, Sustainable Urbanization, industrialization and poverty reduction; Social and technological change, Industrial Processes: Material selection, Pollution Prevention, Industrial Ecology, Industrial symbiosis.

Text Books:

1. Allen, D. T. and Shonnard, D. R., Sustainability Engineering: Concepts, Design and Case Studies, Prentice Hall.

SYLLABUS FOR BASKET OF ELECTIVE COURSE

Track-VI

Water Resources

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
1	Professional Course Courses	PECE-703A-18	Design of Hydraulic Structures	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Content							
Unit 1:Design of Storage Structures – Planning and investigations of reservoir and damsite, choice of dams, Analysis and Design of dams: Gravity dams, Earthen dams, rockfill dams, buttress dams. Spillway and Non-overflow sections and their design, Types of spillways, Flow characteristics of gated/ungated spillways. Types of energy dissipators Influence of tail water rating curve on choice of energy Dissipater, Backwater curve analysis for reservoirs.							
Unit 2: Diversion Structures- Barrages and weirs on permeable foundations, Design of different types of weirs: Sharp crested weirs, broad crested weirs. Barrage components: Glacis, Rigid apron, Flexible (concrete block) apron, Design consideration of barrages for surface and sub-surface flows,causes of failure, Bligh’s and Lane’s creep theory,Khosla’s theory and method of independent variables, standard profiles, corrections, exit gradient, plotting of HGL, Design of d/s and u/s protection works, length of pucca concrete floor.							
Unit 3: Canal Structures- Head regulator, Cross regulator and Falls, Canal section design (unlined and lined); in cutting and filling, Aqueducts; Super passage; Syphon Aqueducts, Distribution structures for conveying water from canals to irrigation fields, Canal capacity determination from field water requirements. Design considerations for cross drainage works: hydraulic structures, including spillways, stilling basins, and embankment seepage; Design of canal falls, Canal Outlets, Essential requirements, classifications, criteria for outlet behaviours, flexibility, proportionality, sensitivity, sensitiveness, Fluming the canal. Design of Channel Transition, Operation and maintenance of canals.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
2	Professional Course Courses	PECE-703B-18	River Engineering	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Content							
Unit 1: Introduction to River Engineering- River classifications, Primary functions of rivers, Rivers in India, Himalaya and Peninsular. River flow kinematics							
Flow resistance in rivers- Physical properties of sediments, sediment movement in rivers, shear stress, shields diagram, scouring around bridge piers and embankments, Bed load and suspended load transport for uniform and non-uniform bed material, Total load equations, sediment sampling, Reservoir sedimentation, river flow and sediment-duration curves.							
Unit 2: River Hydrology- River morphology: thresholds in river morphology, steady river flow, steady non-uniform river flow, river continuity equations, river momentum equations, River gauging, river flood waves, river flood routing.							
River Mechanics- River Equilibrium: particle stability, Stability of Channel, regime relations, river bend equilibrium, downstream hydraulic geometry, meander plan form, geomorphic analysis of river channel responses; Fundamentals of alluvial channel flows, bars in alluvial rivers, Lateral river migration, River dynamics: degradation and aggradation of river bed, River Confluences and branches, River Database.							
Unit 3: River Stabilization- River bank stability, Riverbank riprap revetment, river bank protection, Principles of stabilisation and rectification of rivers, River bank stability analysis, Design of river training works like Revetments, Dikes, groynes, guide banks, gabions, Hydraulic modelling of rivers, Diversion and Cofferdams; River regulations systems;							

Dredging and Disposal, River restoration

Unit 4: River Models- dimensional model studies for rivers, rigid bed models, mobile bed river models, finite difference approximations, one-dimensional and multi-dimensional river models.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
3	Professional Course Courses	PECE-703C-18	Ground Water	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Content							
Unit 1: Introduction- Groundwater in Hydrologic Cycle, Occurrence of groundwater, Hydrogeology, Hydrometeorology, Groundwater Systems, Planning and Management of Groundwater, Groundwater Sustainability, Groundwater protection: Concerns and Acts							
Groundwater Properties- Vertical distribution of subsurface, characteristics and classification of aquifers, Determination of specific yield and permeability. Physical properties of groundwater and aquifers, principles and fundamental equations of porous media flow and mass transport, well hydraulics and pumping test analysis, role of groundwater in the hydrologic cycle, groundwater quality and contamination groundwater hydrology, well hydraulics and well construction, geo-physical explorations, Different types and procedures for analysis of geophysical studies, groundwater quality and management of groundwater resources							
Unit 2: Groundwater Hydraulics- Groundwater movement: Darcy’s law and its limitations, Dupuit–Forchheimer Theory							

of Free-Surface Flow, Stream lines and Flow net analysis, Discharge and draw down for various condition of groundwater flow, Groundwater tracers, continuity equation, equation of motion in ground water,

Well hydraulics- steady/unsteady, uniform/radial flow to a well in a confined/unconfined/leaky aquifer, Well flow near aquifer boundaries/for special conditions, Evaluation of well loss parameters, Partial penetration of wells, Interference of wells, Collector wells and Infiltration galleries. Well Hydraulics: Steady and unsteady radial flows in aquifers; partially penetrating wells; multiple well systems; characteristic well losses; specific capacity, Surface and Subsurface investigations (Geologic methods; remote sensing; geophysical explorations; electrical resistivity and seismic refraction), Water Wells: design, Construction; completion, development, protection and rehabilitation of wells;

Unit 3: Groundwater Quality- Groundwater constituents and contaminants, Water quality standards, Groundwater solubility, Disequilibrium and Saturation Index, sources of groundwater contamination, Mass Transport of Dissolved Contaminants. Groundwater Management: Basin management, investigations, conjunctive use, modelling, artificial recharge; Saline water intrusion

Unit 4: Impact of Climate change – Climate change impact on hydrological cycle, Climate change impact on Groundwater, impact on groundwater quality, climate change simulation, impact on availability of water in aquifer.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
4	Professional Course Courses	PECE-703D-18	Hydraulic Modelling	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Content							
Unit 1: Computational Methods- Basics of Hydraulic Modelling (similarity mechanics, model laws, distinction between numerical and hydraulic models, classification of hydraulic modelling, materials used in the model, scale effect, design, construction, operation and interpretation of the results), applications of computational methods for pipe flow, flow through porous media.							
Unit 2: Groundwater Modelling-Role of instrumentation and data processing; Gravity dominated models (modelling of energy dissipaters, overflow spillways, siphon spillways, bridge piers, vortex formation, cavitation, flow induced vibrations); Gravity friction models: (pumped flow models, ship models, surge tank models); Friction dominated models; River models							

with fixed and mobile bed; Basin and reservoir models; Tidal models with fixed and mobile bed; estuarine models; harbor and breakwater models, models of offshore structures; Hybrid and Analogue models; Scope and limitations of hydraulic modelling, complementary aspects of numerical and hydraulic modelling. Geophysical Subsurface Explorations, Well Hydraulics- Image well theory. Groundwater Modelling, Artificial Recharge of Groundwater, Groundwater Quality Modelling, contaminant transport model, Soil moisture simulation models.

Water Supply Networks: Design and optimization of water distribution system- trial error method, cost-head loss ratio method. Optimization using linear programming techniques, surge analysis in water distribution system, Hybrid and Analogue models; Scope and limitations of hydraulic modelling, complementary aspects of numerical and hydraulic modelling.

Unit 3: RS and GIS: Ideal Remote Sensing System, Spectral Signatures of Earth features, Principles of Interpretation, Use of Remote Sensing and GIS in Water Quality Modelling, vegetation mapping, runoff modelling, Drought and Flood Monitoring, water resource mapping.

Unit 4: Simulation Software in Water Resources: Introduction to Surface water models (HMS) - Storm Water Management Models (SWMM) - Water CAD, STORM CAD - Ground Water Flow models - Visual Modflow.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
5	Professional Course Courses	PECE-703E-18	Transient in Closed Conduits	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							
Content							
Unit 1: Transient Flow Equations- Wave propagations, wave reflection and transmission, Reynold Transport Theorem, Continuity equation, momentum equation, wave velocity, solution of governing equations, Unsteady friction, basic water hammer equations, causes of transient in closed conduits. Analysis of flow in water transmission and water distribution systems (pump & gravity); optimal design and operation of systems for achieving different goals (including latest tools							

available for optimization); Extended period simulations, Software for WDN analysis and design,

Unit 2: Causes of Transients- Transients caused by opening and closing of valves, Transient caused by power failure of pumps. Rehabilitation of pipeline systems; Water auditing, online monitoring and control, leak and burst detection; transient analysis and surge protection; Appurtenances (valves / flow meters etc.); Selection of pipe material; Jointing details; Pipe laying and testing; Structural design for buried and surface mounted pipes unsteady flow in pipes (water hammer) and designing for surge protection; Differential equations for unsteady pipe flow.

Unit 3: Transient Control- Surge Tanks: Types of surge tanks, analysis of surge tanks, governing equations, solution of governing equations, surge oscillations in frictionless system, stability of tanks, design considerations. Air Chamber, Valves, Optimal transient control. transients in penstocks of hydro-electric schemes; analysis for transient control using surge tanks; air chambers; air valves; pressure regulating valves etc.; Emphasis should be on development of computer programs for transient analysis; awareness about commercially available software for transient analysis

4. Design of Irrigation Structures by R.K. Sharma, Oxford IBH Pub

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours			Credits
				L	T	P	
6	Professional Course Courses	PECE-703F-18	Urban Hydrology and Hydraulics	3	1	0	4
External Marks: 60, Internal Marks: 40, Total Marks: 100							

Content

Unit 1: Introduction- Trends of Urbanization and Industrialization, Urban water supply demand forecast, urban hydrological cycle.

Unit 2: Urban water Management- Rain water harvesting, managed aquifer recharge, effect of water management practices on urban water infrastructure, hydrology and ground water regime, mapping of water supply and sewage networks.

Urban water Infrastructure- water supply, sanitation, sewerage and wastewater conveyance infrastructures, Water supply and sewerage network hydraulics, Structural safety and mitigating plans against natural and human caused threats.

Unit 3: Urban Storm water- Master drainage plans, Estimation of urban stormwater quantity, Wastewater collection systems, Design of storm sewer network systems, Storage facilities. Interaction between urban drainage and solid waste management, Stormwater Management, Operation and maintenance of urban drainage system.

Unit 4: Sustainable Design- Sustainable urban designs, Methodologies for assessing sustainability of urban water infrastructures, Emerging sustainable materials and design procedures for water supply and sewerage pipelines, determination of design flow; runoff for highways, airports, and urban areas; design of drainage gutters, channels, sewer networks, and culverts.

SYLLABUS FOR Open Elective

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
1	Open Elective	OECE-701-18	Metro Systems and Engineering	3	0	0	3
<p>Syllabus Content:</p> <p align="center"><u>PART-A</u></p> <p>Introduction to Metro systems</p> <p>Overview of Metro Systems; Need for Metros; Routing studies; Basic Planning and Financials.</p> <p>Planning and Development</p> <p>Overview and construction methods for: Elevated and underground Stations; Viaduct spans and bridges; Underground tunnels; Depots; Commercial and Service buildings. Initial Surveys & Investigations;</p> <p>Traffic Management Systems</p> <p>Basics of Construction Planning & Management, Construction Quality & Safety Systems. Traffic integration, multimodal transfers and pedestrian facilities; Environmental and social safeguards; Track systems-permanent way. Facilities Management Module</p> <p align="center"><u>PART B</u></p> <p>Signalling Systems</p> <p>Introduction to Signalling systems; Automatic fare collection; Operation Control Centre (OCC and BCC); SCADA and other control systems; Platform Screen Doors.</p> <p>Electrical Systems</p> <p>OHE, Traction Power; Substations-TSS and ASS; Power SCADA; Standby and Back-up systems; Green buildings, Carbon credits and clear air mechanics.</p>							

Mechanical Systems

Ventilation systems; Air conditioning for stations and buildings; Fire control systems; Lifts and Escalators

Text Books:

1. “Electric Traction for Railway Trains: A Book for Students, Electrical and Mechanical Engineers, Superintendents of Motive Power and Others” Edward Parris Burch Palala Press 2018.
2. “Metropolitan Railways: Rapid Transit in America (Railroads Past and Present)”, Middleton, Indiana University Press 2013.
3. “World Metro Systems”, Garbutt, Capital Transport Publishing; 2nd Revised edition 1997.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per week			Credits
				L	T	P	
2	Open Elective	OECE-702-18	Traffic Management	3	0	0	3
<p>Unit-1 :Fundamentals of Traffic Management</p> <p>Principles of Traffic management; Highway capacity and Level of service; Mixed Traffic flow: PCU concept and its limitations; Traffic stream parameters: Interrupted and Uninterrupted flow</p> <p>Unit-2: Traffic Regulation and Control devices</p> <p>Road Signs and markings; Channelization; At-grade and Grade separated intersections; Traffic Rotary; Design principles of traffic signals</p>							

Unit-3: Traffic Management techniques

Regulatory measures for Traffic management; Travel Demand Management; Role of ITS in traffic management

Unit-4 : Logistics for Traffic Management

Definition, domain, role and responsibility of traffic management agencies, Principles and systems of coordination in Traffic management; Intelligent transport system- concept, Traffic Management logistics - equipment's, vehicles and traffic control centre; Centralized Data Processing and Monitoring, Traffic personnel- skills & deployment systems.

Seventh/Eight Semester							
S. No.	Category	Code	Course Title	Hours per			Credits
				L	T	P	
6	Professional Core courses	HSMC -255	Professional Practice, Law & Ethics	2	0	0	2
<p>Basic elements of civil engineering professional practice are introduced in this course. Roles of all participants in the process-owners, developers, designers, consultants, architects, contractors, and suppliers - are described. Basic concepts in professional practice, business management, public policy, leadership, and professional licensure are introduced. The course covers professional relations, civic responsibilities, and ethical obligations for engineering practice. The course also describes contracts management, and various legal aspects related to engineering. Further, the course familiarizes students with elementary knowledge of laws that would be of utility in their profession, including several new areas of law such as IPR, ADR.</p> <p>The course is designed to address the following:</p> <ul style="list-style-type: none"> • To make the students understand the types of roles they are expected to play in the • society as practitioners of the civil engineering profession • To develop some ideas of the legal and practical aspects of their profession <p>UNIT 1. Professional Ethics – Definition of Ethics, Professional Ethics, Business Ethics, Corporate Ethics, Engineering Ethics, Personal Ethics; Code of Ethics as defined in the website of Institution of Engineers (India); Profession, Professionalism, Professional Responsibility, Professional Ethics; Conflict of Interest, Gift Vs Bribery, Environmental breaches, Negligence, Deficiencies in state-of-the-art; Vigil Mechanism, Whistleblowing, protected disclosures.</p> <p>UNIT 2: General Principles of Contracts Management: Indian Contract Act, 1972 and amendments covering General principles of contracting; Contract Formation & Law; Privacy of contract; Various types of contract and their features; Valid & Voidable Contracts; Prime and sub-contracts; Joint Ventures & Consortium; Complex contract terminology; Tenders, Request For Proposals, Bids & Proposals; Bid Evaluation; Contract Conditions & Specifications; Critical “Red Flag” conditions; Contract award & Notice To Proceed; Variations & Changes in Contracts; Differing site conditions; Cost escalation; Delays, Suspensions & Terminations; Time extensions & Force Majeure; Delay Analysis; Liquidated damages & Penalties; Insurance & Taxation; Performance and Excusable Non-performance; Contract documentation; Contract Notices; Wrong practices in contracting (Bid shopping, Bid fixing, Cartels); Reverse auction; Case Studies; Build-Own-Operate & variations; Public-Private Partnerships; International Commercial Terms;</p> <p>UNIT 3 : Arbitration, Conciliation and ADR (Alternative Dispute Resolution) system: Arbitration – meaning, scope and types – distinction between laws of 1940 and 1996; UNCITRAL model law – Arbitration and expert determination; Extent of judicial intervention; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal – appointment, challenge, jurisdiction of arbitral tribunal, powers, grounds of challenge, procedure and court assistance; Award including Form and content, Grounds for setting aside an award, Enforcement, Appeal and Revision; Enforcement of foreign awards – New York and Geneva Convention Awards; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality, resort to judicial</p>							

proceedings, costs; Dispute Resolution Boards; LokAdalats.

UNIT 4 :Engagement of Labour and Labour& other construction-related Laws:Role ofLabour in Civil Engineering; Methods of engaging labour- on rolls, labour sub-contract, piece rate work; Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen's Compensation Act, 1923; Building & Other Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998); RERA Act 2017, NBC 2017

UNIT 5 : Law relating to Intellectual property:Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relatingto Patents under Patents Act, 1970 including Concept and historical perspective of patentslaw in India, Patentable inventions with special reference to biotechnology products, Patent protection for computer programs, Process of obtaining patent – application, examination, opposition and sealing of patents, Patent cooperation treaty and grounds for opposition, Rights and obligations of patentee, Duration of patents – law and policy considerations, Infringement and related remedies;

1	Professional Core courses	BTCE 802-18	Smart Cities	3	1	0	4
Course objectives To obtain basic knowledge of smart cities To learn how to analyze and compare existing smart community projects. Unit-1: Definition and concept of smart city, Difference between: Intelligent city, Digital city, and E-city, Objectives, principles, stages in smart city planning, Smart city planning schemes. Complexities of Smart cities, Smart cities in India. Unit-2: Structure plan, detailed smart city planning scheme and action plan, Estimating future needs, planning standards for different land use allocation for commerce, industries, public amenities, open areas etc., Unit-3: Smart infrastructure with adaptive capabilities; smart infrastructures of energy, mobility, health and sustainability and their growing interdependencies. Cybersecurity, Safety, and Privacy. Unit-4 ICT for smart City, Internet of Things, Blockchain, Artificial Intelligence, Alternate Reality, Virtual Reality, Future of Smart cities, Smart City Informatics Reference Books: 1. Jo Beall (1997); "A city for all: valuing differences and working with diversity"; Zed books limited, London (ISBN: 1-85649-477-2) 2.
